

CASE STUDY

To help us keep a safe distance in store

Do not enter the store

WORLD CLASS RESPONSE

During the peak of COVID a lot of supermarkets introduced a maximum capacity within their stores, and due to the unforeseen circumstances surrounding the global pandemic, this required manufacturers to act quickly, this is where RGL exceeded the expectations of its customer.

THE COMPANY

A customer approached us with the requirement for a control unit to monitor the traffic light system allowing access into a chain of supermarkets.

In the midst of the pandemic, this needed to be completed with parts we had available to us, or easily accessible from local retailers, and in about an sixth of the time it would normally take.

COMPLEXITY

Hugely complex project, requiring components that could be sourced immediately.

TIME CONSTRAINT

This was a project that normally needed a minimum of 6 months for completion, however we only had 1 month for delivery.

INNOVATION

This required considerable ingenuity in order to get the project over the line, which only comes from a company with electronics experts

OUTCOME

The project was a resounding success, and far exceeded our customers expectations. They didn't expect to find a supplier who could complete the task in the short timeline on offer.

This can only be achieved by a company that has the resources, expertise, stock capacity and ability to think outside of the box to achieve their goal.

CONCLUSION

- Do you need a product to carry out a specific function that isn't on the market currently (or too high priced)
- Do you require access to experts in their field to offer guidance and support through the project.
- Do you need to take your product to the next level, looking for additional functionality and upgrades.
- RGL has done this for numerous customers in the past, get in touch and see what we can do for you!
